MUHAMMED ASLAM

.NET FULL STACK DEVELOPER

+91 9061651957 | muxd.aslam@gmail.com | Portfolio | LinkedIn: muxd-aslam | GitHub: muxdaslam-sys

PROFESSIONAL SUMMARY

Results-driven **.NET Full Stack Developer** with hands-on experience engineering scalable, high-concurrency enterprise web applications using **C#, ASP.NET Core 8 Web API, Angular 19, Entity Framework Core, SignalR WebSockets, and Microsoft SQL Server**. Proficient across the complete software development lifecycle, from architecting real-time event-driven systems and asynchronous concurrency mutexes to sub-millisecond database indexing and responsive, 60fps front-end UI architecture. Dedicated collaborator with client-facing domain experience, committed to writing clean, maintainable code leveraging modern SOLID principles and AI-assisted development tools.

TECHNICAL SKILLS

Languages:	C#, TypeScript, SQL, JavaScript, HTML5, CSS3
Frameworks & ORM:	ASP.NET Core (.NET 8), Angular 19, ASP.NET Web API, Entity Framework Core, ASP.NET MVC 5, ADO.NET
Web & Real-Time:	SignalR (WebSockets), RxJS (Signals & Mutex), RESTful APIs, JSON, Swagger, Bootstrap 5, Tailwind CSS
Databases:	Microsoft SQL Server, SSMS, Filtered B-Tree Indexes, Stored Procedures, Views, Query Optimization
Generative AI & Productivity:	Prompt Engineering, GitHub Copilot, OpenAI Codex, Claude, Google Gemini
Tools & DevOps:	Git, GitHub, GitHub Actions (CI/CD Pipelines), Visual Studio, VS Code, Postman, IIS Express
Architecture & Security:	N-Tier Architecture, Micro-Modular Architecture, Concurrency Control, Role-Based Access Control (RBAC), HIPAA Section 164.312

TECHNICAL PROJECTS

VitalQ - Real-Time Hospital OPD Priority Queue & Clinical Orchestration System github.com/muxdaslam-sys/VitalQ

Angular 19, ASP.NET Core 8 Web API, C#, SQL Server, SignalR WebSockets, EF Core, RxJS, Tailwind CSS

- Architected a clinic-wide real-time queue orchestration platform supporting 10,000+ concurrent users; engineered a multi-group SignalR WebSocket hub (`doctor`, `patient`, `nurse-station`, `admin-dashboard`) with dynamic JWT access-token rotation for resilient Wi-Fi reconnects, reducing server network polling by 95%.
- Built an automated clinical consultation engine featuring a UTC-normalized pacing stopwatch (`parseUtcTimestamp`) to eliminate timezone drift and a 3-strike absentee/no-show protocol with in-app warnings, holding, and auto-expiry with mandatory audit logging.
- Designed an emergency triage intake system based on the Canadian Triage and Acuity Scale (CTAS Levels 1–5), evaluating patient vitals (BP, SpO2, HR, Blood Glucose) for instant physician routing, paired with a waiting-time aging algorithm and nurse re-queue workflows.
- Engineered a secure multi-role authentication system (Doctors, Nurses, Admins, Patients) with 60-minute JWTs and HttpOnly cookies; eliminated token-rotation race conditions using an RxJS concurrency mutex, preventing unexpected session logouts during parallel requests.
- Delivered 60fps rendering across 7 administrative modules using Angular 19 Signals and OnPush change detection; optimized SQL Server throughput using 23 physical Filtered B-Tree and covering indexes achieving sub-millisecond (<0.5ms) memory seeks with zero slow table scans.

JobNest - Recruitment & Job Portal Web Application github.com/muxdaslam-sys/JobNest

ASP.NET MVC 5, C#, Entity Framework 6, SQL Server, LINQ, Razor, Bootstrap, JavaScript

- Architected an end-to-end recruitment web portal featuring dedicated workflows, secure session authentication, and role-based access for Employers and Job Seekers.
- Engineered a multi-criteria search and filtering system enabling applicants to instantly query live job openings by role, technical skills, experience level, and geographic location.
- Constructed a secure candidate resume submission pipeline with server-side file inspection (MIME validation, 5MB file restrictions, and unique randomized naming to prevent upload exploits).
- Developed an interactive Employer Applicant Tracking (ATS) Dashboard featuring AJAX-driven resume previews, real-time candidate status updates (Applied, Shortlisted, Rejected), and recruiter review notes.
- Designed a normalized SQL Server relational schema using Entity Framework Database-First, optimized LINQ queries, and stored procedures; implemented anti-forgery tokens (CSRF protection) to secure form submissions.

PROFESSIONAL EXPERIENCE

.NET Full Stack Developer Intern **Jan 2026 - Jun 2026**

Luminar Technolab

- Engineered scalable enterprise RESTful Web APIs using C#, ASP.NET Core 8, and Entity Framework Core following N-Tier architecture and SOLID principles.
- Developed modern, responsive client-side interfaces using Angular 19, TypeScript, RxJS, and Bootstrap/Tailwind CSS with OnPush change detection and component reusability.
- Designed normalized SQL Server database schemas, authored complex stored procedures, triggers, and indexed views, and conducted performance tuning to eliminate query bottlenecks.
- Maintained strict Git version control workflows, collaborating via feature branching, pull requests, automated CI/CD builds, and rigorous code reviews.

Digital Marketer & Web Developer **May 2025 - Present**

Deccorlook & National Hospital

- Developed, modernized, and maintained responsive corporate websites and landing pages using **HTML5, CSS3, JavaScript, Bootstrap, and CMS platforms**, improving mobile UX and reducing bounce rates by 35%.
- Developed digital warranty registration portals and internal CRM modules for inventory tracking, enabling streamlined serial verification, customer records, and real-time stock management.
- Implemented technical on-page SEO architectures (semantic HTML structure, Core Web Vitals optimization, Schema.org markup) and configured Google Tag Manager / GA4 event tracking for lead generation funnels.
- Spearheaded performance marketing campaigns across Google Search/Display and Meta Ads, analyzing traffic metrics and conversion funnels to consistently maximize inquiry acquisition.

EDUCATION

Bachelor of Computer Applications (BCA) **Sep 2022 - Apr 2025**

Ilahia College of Arts and Science | Relevant Coursework: Data Structures, Database Management Systems (DBMS), OOP, Web Technologies, Software Engineering
